- Extensive range of accessories
- Consistent implementation of the requirements from the technical regulation 12-2012

# A Compelling Case: A Flat Roof Tile Not Only For Flat Graded Roofs.

## The genuine Laumans clay tile roof

Make your roof a piece of lasting value. Use the Tiefsa 2000Top® wide range of colours and accessories to make your roof an individual masterpiece. The Laumans clay roof tile is a natural building material, crafted from clay in an ecologically optimised process, allowing you to invest with a good conscience. It distinguishes itself by its enormous durability, resisting all environmental influences and UV-radiation. Furthermore it is completely recyclable. A genuine Laumans clay tile roof connects you to nature.

## You can rely on it. In all situations.

The Tiefsa 2000TOP® is a modern flat roof tile for the highest standards. With its discreet flap, it gives the roof surface a linear and harmonious appearance. The effect is a smooth, even effect, which forms a perfect unit with your house with its soft transitions between light and shadow. It is predestined for single and two-family houses due to its classical shape. Its well-balanced proportions create a coherent overall appearance for your house. In contrast to many large tiles, the Tiefsa 2000TOP® has a light visual effect and has to be cut far less often when forming detail features.

## All advantages on your side

The Tiefsa 2000TOP® was designed for the highest safety on flat roofs. The intensive interlocking in the four-tile corner (four-way covering) and its special interlocking joint system (deep joint) make it extremely secure against driving rain, blowing snow and wind suction. Additionally, its variable lath tolerance hugely simplifies handling of the tiles and gives it a "certain something", which makes it unbeatable for covering roofs on existing battens. Tiefsa 2000TOP® – the renovation tile.

## Enduringly beautiful and of lasting value

Our colours and surface finishes enable you to coordinate the roof very individually with your building. Regardless of whether you choose matching shades or a more contrasting effect, the Tiefsa 2000TOP® will work.

Laumans has a huge range of accessories for the Tiefsa 2000TOP®. Only the use of clay accessories creates a truly enduring and professional solution: there is no material fatigue even decades later. Thus, the diverse functions of the roof are fulfilled down to the last detail. For a reliable, safe roof. Now and in the future.

## And the love of detail goes further ...

Laumans offers countless design possibilities with its roof accessories. Because such shaped tiles have no technical function, but are merely designed to create a visual effect for the observer, they are also called roof ornaments. Would you like a dog, cat or mouse on the ridge? Or a relief slab for the gable colour-coordinated with the roof? No problem! Laumans realises your love of details in ceramic.

Top security also for flat graded roofs – the TIEFA 2000TOP®

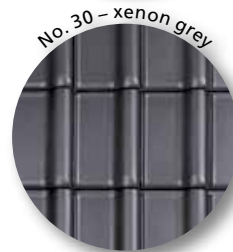

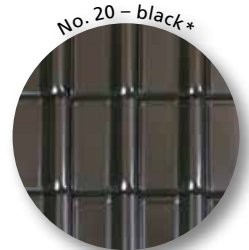

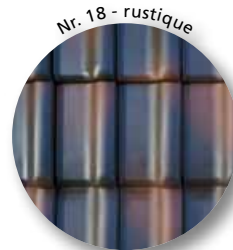

# Show Your Colours. Make A Statement. Use The Possibilities.

## Natural / Natural Engobes *Matt surface finish*

## Sinter Engobes *Semi-gloss surface finish*

With expressive colours and distinctive surface finishes, you have many possibilities for realising your design ideas. In addition to warm earth and red shades and eye-catching greys and blacks, the **Tiefa 2000Top®** is also available in the varied, mottled finish „rustique“.

Effectively express your aesthetic perspective. Guarantee the harmonious overall character of your house.

\*noble glaze

### Natural red

Only fired clay tiles can be called "natural red". The appearance of this colour can vary, which produces an animated roof appearance.

### Natural Engobes

An engobe made of natural minerals is applied to the dried clay tile before firing. This fine clay slurry allows natural earth-coloured tones. During firing the engobe forms a permanent bond with the clay tile creating a lively nuanced interplay of colours.

### Sinter Engobes

Engobes are refined by the addition of glass particles. The surface is significantly harder and therefore less sensitive to mechanical shocks and scratches. Besides the denser surface has a dirt repellent effect similar to a glaze. Our Sinter Engobes are vapour permeable and characteristically semi-glossy.

### Show your colours

Do you already know Laumans' full colour and clay tile assortment? Apart from the **Tiefa 2000Variabel** we offer many other tile types in a great variety of colours.

**Tip:** Take a look at our Brilliant Glaze, a ceramic surface finish of outstanding quality. Applied after the firing process, it gives a vivid, glassy high-gloss look to the clay tile. Just ask for further information or get in touch with us. You can find contact details on the back of this booklet or on [www.laumans.de](http://www.laumans.de).

Our clay roof tiles are produced according to the DIN EN 1304 specifications and exceed the specified standards on many levels.

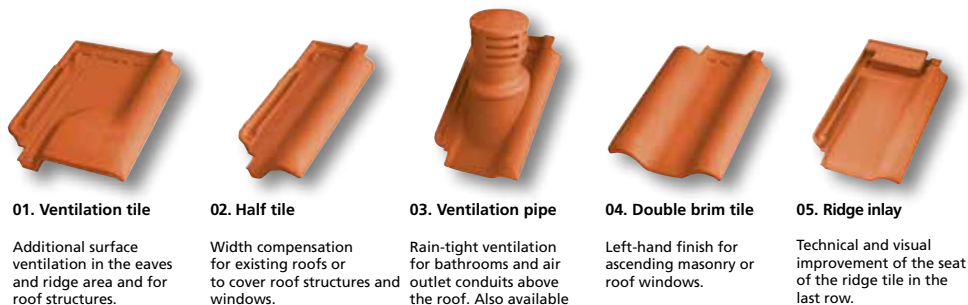

# Experience Makes The Difference. Clay Tile Roofs With System.

**A must for guaranteed safety: clay**  
To ensure your roof becomes an all-ceramic masterpiece, you will receive accessories precisely tailored to the **Tiefa 2000Top®**, which will make your roof a genuine Laumans clay tile roof in every functional area from the ventilation to the ridge ornaments. Perfect in function and unbeatable in appearance. Naturally in any possible finish and colour. Laumans also produces bespoke detail solutions to your individual requirements on request. Speak to your specialist.

**Original Laumans clay tile roof**  
The illustrations below show which areas of the roof a ceramic solution is best for. Only the all-ceramic roof, from the eaves to the ridge, guarantees the unmistakable overall performance of a Laumans clay tile roof.

**01. Ventilation tile**

Additional surface ventilation in the eaves and ridge area and for roof structures.

**02. Half tile**

Width compensation for existing roofs or to cover roof structures and windows.

**03. Ventilation pipe**

Rain-tight ventilation for bathrooms and air outlet conduits above the roof. Also available as an antenna tile.

**04. Double brim tile**

Left-hand finish for ascending masonry or roof windows.

**05. Ridge inlay**

Technical and visual improvement of the seat of the ridge tile in the last row.

**06. Verge tile**

Visually compact finish to the side roof plane and protection for the roof connection against driving rain.

**07. Shed roof tile**

Finishing tile for all penthouse roofs. With 90° angle as a standard accessory. Other shapes on the request of the roofer.

**08. Mansard tile**

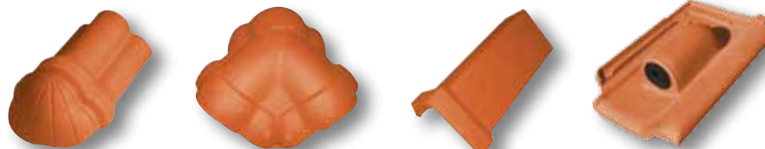

The shaped tile for creating mansard roofs or other creative roof shapes according to the requirements of the roofer.

**09. Ridge tile no. 1000**

Perfect finishing tile for secure coverage of adjacent roof planes on the ridge and hip.

**10. Ridge starting/ending tile**

Elegant ridge formation as a starting and ending tile.

**11. Hip starting tile**

Shapely and functional design for the start of the hip.

**12. Hip cap**

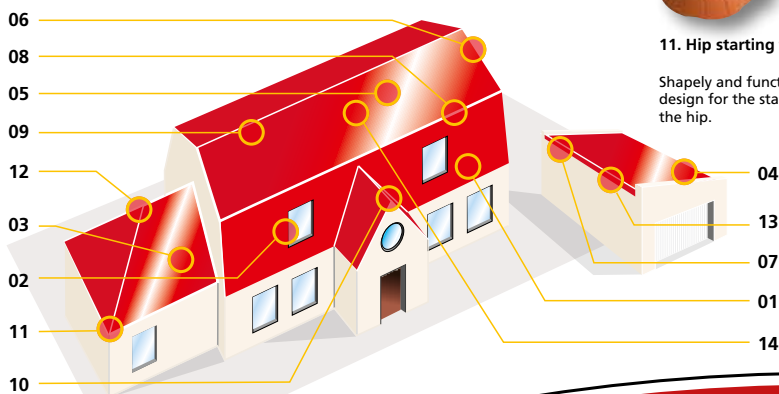

All-ceramic covering of the transition between the ridge and hip. Suitable for roof pitches of 18 – 50°.

**13. Universal shed roof tile**

Universal cover with finishing tiles.

**14. Solar connection tile**

Accessory tile for solar systems for penetration of the connection cable and pipework.

**More accessories**

Of course you can obtain more non-ceramic accessories from Laumans for functional aspects like storm safety, snow guarding and solar energy use.

# The Straight Style: **TIEFA 2000TOP®.** Taking Safety To The Top.

Would you like to know more? Just contact your roofer or specialist dealer or get in touch with Laumans – fast and without obligation. You will discover how to get the roof of your dreams.

Apart from the Tiefa 2000TOP® we offer other tile types in many shapes, colours and surface finishes. Feel free to visit [www.laumans.de](http://www.laumans.de) and view our complete product range.
