## TIEFA 2000TOP®: Flat roof tile – newest generation

- Optimised rain tightness
- More discreet appearance through enlarging the trough in relation to the brim
- Completely compatible with the forerunner Tiefa 2000Variabel
- Increased covering clearance of up to 20 mm
- Unchanged variety of colours
- Perpetuation of the popular tile shape and proportions
- Extensive range of accessories
- Consistent implementation of the requirements from technical regulation 12-2012

# A clear-cut case: a flat roof tile not only for low-pitched roofs.

## The genuine Laumans clay tile roof

Make your roof a piece of lasting value. Use the **Tiefa 2000Top®** wide range of colours and accessories to make your roof an individual masterpiece. The Laumans clay roof tile is a natural building material, crafted from clay in an ecologically optimised process, allowing you to invest with a good conscience. It distinguishes itself by its enormous durability, resisting all environmental influences and UV-radiation. Furthermore it is completely recyclable. A genuine Laumans clay tile roof connects you to nature.

## You can rely on it. In all situations.

The **Tiefa 2000Top®** is a modern flat roof tile for the highest standards. With its discreet flap, it gives the roof surface a linear and harmonious appearance. The effect is a uniform, calm effect, which forms a perfect unit with your house with its soft transitions between light and shadow. It is predestined for single and two-family houses due to its classic shape. Its well-balanced proportions create a coherent overall appearance for your house. In contrast to many large tiles, the **Tiefa 2000Variabel** creates a visual impression of lightness and has to be cut far less often when forming detail features.

## All advantages on your side

The **Tiefa 2000Top®** was designed for the highest safety on flat roofs. The intensive interlocking in the fourtile corner (four-way covering) and its special interlocking joint system (deep joint) make it extremely secure against driving rain, blowing snow and wind suction. Additionally, its variable lath tolerance hugely simplifies handling of the tiles and gives it a 'certain something', which makes it unbeatable for covering roofs on existing battens. **Tiefa 2000Top®** – the renovation tile.

## Enduringly beautiful and of lasting value

Five colours and two surface finishes make it possible for you to match the roof to your building in your very own way.

Its greatness lies in the details. For the effective venting of waste air ducts, for example, only the use of clay accessories creates a truly enduring and professional solution: there is no material fatigue even decades later. Thus, the diverse functions of the roof are fulfilled down to the last detail. For a reliable, safe roof. Now and in the future.

## And the love of detail goes further ...

Laumans offers countless design possibilities with its roof ornaments. These shaped tiles do not have any technical function, but have an enormous visual effect on the observer. Laumans applies your love of details to ceramics.

Top security also for flat graded roofs – the **TIEFA 2000TOP®**

**Show your colours.  
Make a statement.  
use the possibilities.**

**Natural /  
Natural engobes**  
Matt surface finish

**Sinter engobes**  
Semi-gloss surface finish

With expressive colours and distinctive surface finishes, you have many possibilities for realising your design ideas. Apart from the warm earth-coloured shades and the eye-catching grey and black shades, the Tiefa 2000Top® captivates also in the varied, mottled finish 'Rustique'. One of many shades from the surface series of the natural engobes.

In this case, during the production process an engobe of natural minerals is applied to the dried green tile before firing. These ground-in clay slurries make permit particularly natural colourings in the earthcoloured range. The engobe forms a firm bond with the tile during the firing process and provides it with a nuanced interplay of colours.

\*noble glaze

**Natural red**

Only fired clay tiles can be called "natural red". The appearance of this colour can vary, which produces an animated roof appearance.

**Natural Engobes**

An engobe made of natural minerals is applied to the dried clay tile before firing. This fine clay slurry allows natural earth-coloured tones. During firing the engobe forms a permanent bond with the clay tile creating a lively nuanced interplay of colours.

**Sinter engobes**

Are refined by the addition of glass particles. The surface is significantly harder and therefore less sensitive to mechanical shocks and scratches. Besides, the denser surface has a dirt repellent effect similar to a glaze. Our Sinter engobes are vapour-permeable and characteristically semi-glossy.

**Show your colours**

Do you already know Laumans' full colour and clay tile assortment? Apart from the Tiefa 2000Variabel we offer many other tile types in a great variety of colours.

**Tip:** Take a look at our Brilliant Glaze, a ceramic surface finish of outstanding quality. Applied after the firing process, it gives a vivid, glassy high-gloss look to the clay tile. Just ask for further information or get in touch with us. You can find contact details on the back of this booklet or on [www.laumans.de](http://www.laumans.de).

Our clay roof tiles are produced according to the DIN EN 1304 specifications and exceed the specified standards on many levels.

# Experience makes the difference. Clay tile roofs with system.

**A must for guaranteed safety: clay**  
To ensure your roof becomes an all-ceramic masterpiece, you will receive accessories precisely tailored to the TIEFA 2000Top®, which will make your roof a genuine Laumans clay tile roof in every functional area from the ventilation to the ridge ornaments. Perfect in function and unbeatable in appearance. Naturally in any possible finish and colour. Laumans also produces bespoke detail solutions to your individual requirements on request. Speak to your specialist

**Original Laumans clay tile roof**  
The illustrations below show which areas of the roof a ceramic solution is best for. Only the all-ceramic roof, from the eaves to the ridge, guarantees the unmistakable overall performance of a Laumans clay tile roof.

01. Ventilation tile

Additional surface ventilation in the eaves and ridge area and for roof structures.

02. Half tile

Width compensation for existing roofs or to cover roof structures and windows.

03. Ventilation pipe

Rain-tight venting for bathrooms and air outlet conduits above the roof. Also available as an antenna tile.

04. Double brim tile

Left-hand closer for ascending masonry or roof windows.

05. Ridge inlay

Visually compact closer for the lateral roof surface and protection of the roof connection from driving rain.

06. Verge tile

Visually compact closer for the lateral roof surface and protection of the roof connection from driving rain.

07. Shed roof tile

Finishing tile for all penthouse roofs. With 90° angle as a standard shaped part. Other shapes according to of the roofer.

08. Mansard tile

The accessory for creating mansard roofs or other creative roof shapes according to the roofer's requirements.

09. Ridge tile No. 1000

Perfect finishing tile for secure coverage of adjacent roof planes on the ridge and hip.

10. Ridge starting/ending tile

Elegant ridge formation as a starting and ending tile.

11. Hip starting tile

Beautiful and functional design for the start of the hip.

12. Hip cap

All-ceramic covering of the transition between the ridge and hip. Suitable for roof pitches of 18 – 50°.

13. Universal shed roof tile

Universal cover with finishing tiles.

14. Solar connection tile

Accessory tile for solar systems for penetration of the connection cable and pipework.

### More accessories

Of course you can obtain more non-ceramic accessories from Laumans for functional aspects like storm safety, snow guarding and solar energy use.
